1 General Specifications

Feature		Spec
Display Spec.	Size	15 inch
	Resolution	1024xRGBx768
	Technology Type	a-Si
	Pixel Configuration	RGB vertical stripe
	Pixel pitch(mm)	0.297(H) × 0.297(V)
	Display Mode	TM with Normally White
	Surface Treatment	Anti Glare
	Viewing Direction	12:00
	Gray Scale Inversion Direction	6:00
Mechanical Characteristics	LCM (W x H x D) (mm)	326.5(H)×253.5 (V) ×10.0 (D) (max.)
	Active Area(mm)	304.128(W) x 228.096 (V) (typ.)
	With /Without TSP	Without TSP
	Connection Type	CN1:185083-20121-3 CN2:MSB24038P5
	Weight (g)	TBD
	Backlight	LED backlight type Replaceable lamp holder for backlight
Electrical Characteristics	Interface	LVDS 1port
	Color Depth	16.7M/262K

Note 1: Viewing direction for best image quality is different from TFT definition. There is a 180 degree shift.

Note 2: Requirements on Environmental Protection: RoHS

Note 3: LCM weight tolerance: ± 5%

Note1: Relations between GND (Signal ground and LED driver ground) and FG (Frame ground) in the LCD module are as follows:

GND - FG	Connected

Note2: GND and FG must be connected to customer equipment's ground, and it is recommended that these grounds be connected together in customer equipment.

# 5 DISPLAY COLORS AND INPUT DATA INFORMATION

5.1 DISPLAY COLORS AND DATA SIGNAL

This product can display in equivalent to 16,777,216 colors in 254 scales. Also the relation between display colors and input data signals is as the following table. And it can display in equivalent to 262,144 colors in 64 scales, without data signals R7, R6, G7, G6, B7, B6 in the following table.

Test Conditions:

1. The ambient temperature is 25℃. LCD_VCC= 3.3V, BL_PWR=12V, 100% brightness,

2. The test systems refer to Note 1 and Note2.

Note 1:   Definition of optical measurement system.

The optical characteristics should be measured in dark room. After 5 Minutes operation, the optical properties are measured at the center point of the LCD screen. All input terminals LCD panel must be ground when measuring the center area of the panel.

Note 3:   Definition of contrast ratio

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance measured when LCD is on the "White" state}}{\text{Luminance measured when LCD is on the "Black" state}}$$

"White state ": The state is that the LCD should drive by Vwhite.

"Black state": The state is that the LCD should drive by Vblack.

Vwhite: To be determined   Vblack: To be determined.

Note 4:   Definition of Response time

The response time is defined as the LCD optical switching time interval between "White" state and "Black" state. Rise time (T_{ON}) is the time between photo detector output intensity changed from 90% to 10%. And fall time (T_{OFF}) is the time between photo detector output intensity changed from 10% to 90%.
Note 5:   Definition of color chromaticity (CIE1931)

Color coordinates measured at center point of LCD.

Note 6:   Definition of Luminance Uniformity

Active area is divided into 9 measuring areas (Refer Fig. 2). Every measuring point is placed at the center of each measuring area.

Luminance Uniformity (U) = Lmax/ Lmin

L-------Active area length W----- Active area width

Lmax: The measured Maximum luminance of all measurement position.

Lmin: The measured Minimum luminance of all measurement position.

Note 7:   Definition of Luminance:

Measure the luminance of white state at center point.

Note1: Ts is the temperature of panel's surface.

Note2: Ta is the ambient temperature of sample.

Note3: Before cosmetic and function test, the product must have enough recovery time, at least 2 hours at room temperature.

Note 4: In the standard condition, there shall be no practical problem that may affect the display function. After the reliability test, the product only guarantees operation, but don't guarantee all of the cosmetic specification.

11 PACKING, TRANSPORTATION AND DELIVERY

Tianma will pack products to deliver to customer in accordance with Tianma packing specifications, and will deliver products to customer in such a state that products will not suffer from a damage during transportation .The delivery conditions are as follows.

11.1 PACKING

(1) Packing box
10 products are packed up with the maximum in a packing box (See "11.5 OUTLINE FIGURE FOR PACKING ").
Products are put into a plastic bag for prevention of moisture with cushion, and then the bag is sealed up with heat sealing.
The type name and quality are shown on outside of the packing box, either labeling or printing.
(2) Pallet Packing
① Packing boxes are tied on a cardboard pallet. (4 boxes×3 tiers maximum)
② Cardboard sleeve and top cap are attached to the packing boxes, and then they are fixed by a band.

11.2 INSPECTION RECORD SHEET

Inspection record sheets are included in the packing box with delivery products to customer. It is summarized to a number of products for pass/fail assessment.

11.3 TRANSPORTATION

The product is transported by vehicle, aircraft or shipment in the state of pallet packing.

12 Precautions for Use of LCD Modules

12.1 Handling Precautions

 12.1.1 The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.

 12.1.2 If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.

 12.1.3 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.

 12.1.4 The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.

 12.1.5 If the display surface is contaMinated, breathe on the surface and gently wipe it with a soft dry cloth. If still not completely clear, moisten cloth with one of the following solvents:

 — Isopropyl alcohol

 — Ethyl alcohol

Solvents other than those mentioned above may damage the polarizer. Especially, do not use the following:

 — Water

 — Ketone

 — Aromatic solvents

 12.1.6 Do not attempt to disassemble the LCD Module.

 12.1.7 If the logic circuit power is off, do not apply the input signals.

 12.1.8 To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.

  12.1.8.1 Be sure to ground the body when handling the LCD Modules.

  12.1.8.2 Tools required for assembly, such as soldering irons, must be properly ground.

  12.1.8.3 To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.

  12.1.8.4 The LCD Module is coated with a film to protect the display surface. Be care when peeling off this protective film since static electricity may be generated.

12.2 Storage precautions

 12.2.1 When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.

 12.2.2 The LCD modules should be stored under the storage temperature range. If the LCD modules will be stored for a long time, the recommend condition is:

Temperature : 0℃ ～ 40℃ Relatively humidity: ≤80%

 12.2.3 The LCD modules should be stored in the room without acid, alkali and harmful gas.

12.3 Transportation Precautions

 12.3.1 The LCD modules should be no falling and violent shocking during transportation, and also should avoid excessive press, water, damp and sunshine.
